

Class 10

Discussion Time!

What did we discuss
in our previous session?

Big picture

Relation **among/beyond** propositions

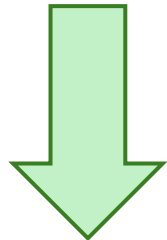

Logical relations

Propositional logic

Beyond logical relations

Pragmatics

[**P** My boyfriend is a vet] and [**Q** he is smart].

In reality: Bad inference

Prediction: Bad inference

Okay. [**R** He lives nearby].

*This is what
logic predicts!*

P	Q	R
T	T	T
T	T	F
T	F	T
T	F	F
F	T	T
F	T	F
F	F	T
F	F	F

Examples

Issue 1: Presupposition

Relation **among/beyond** propositions

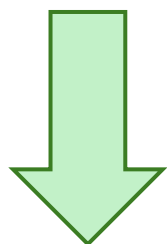

Logical relations

Propositional logic

Beyond logical relations

Pragmatics

[**P** My boyfriend is a vet] and [**Q** he is smart].

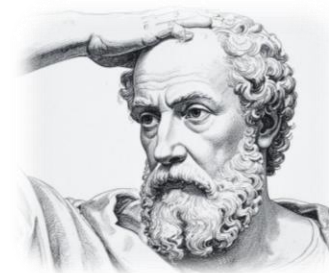

In reality: Good inference

Prediction: Bad inference

Okay. [**R** She has a boyfriend].

Logic cannot explain this!

T	T	T
T	T	F
T	F	T
T	F	F
F	T	T
F	T	F
F	F	T
F	F	F

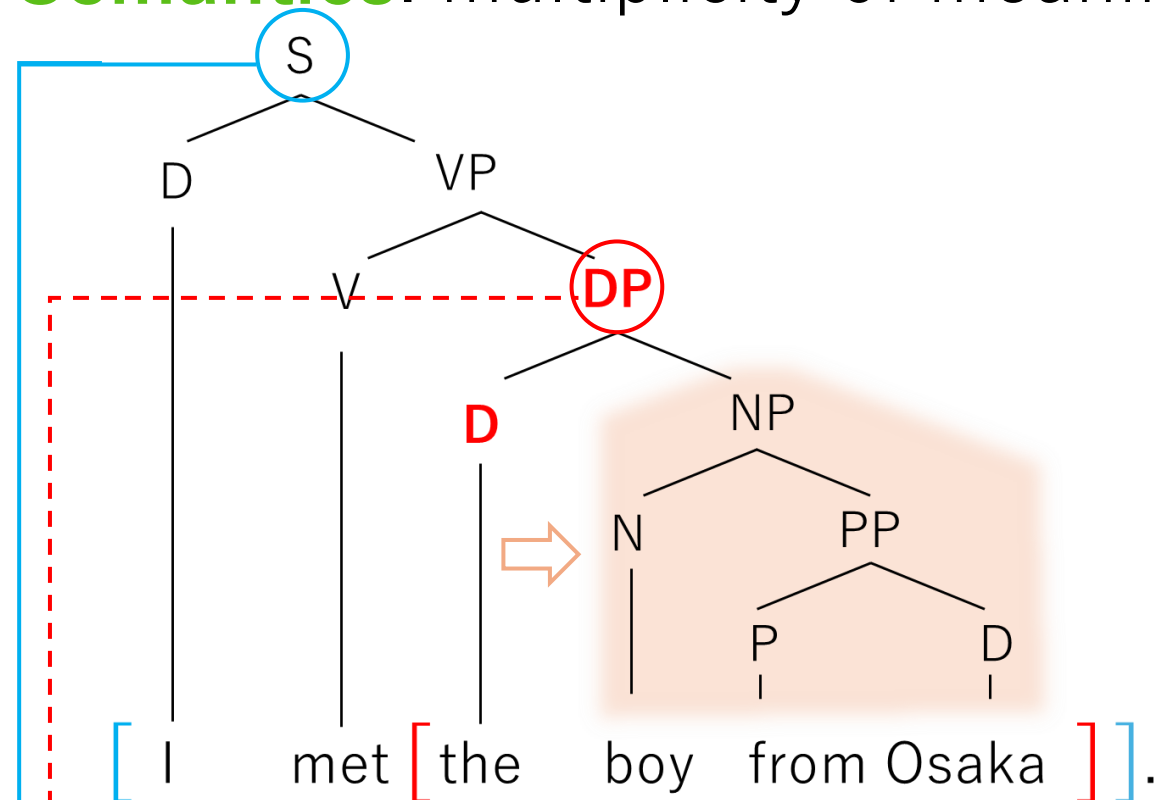

Presupposition

Semantics cares the information derived from a sentence.

Some sentence contains not only **an at-issue meaning** (main message; the target of Truth value judgment) but also **a presupposition** (background information).

Semantics: multiplicity of meaning

→ a. **Presupposition:**

There was a boy from Osaka.

→ b. **At-issue meaning:**

I met the boy from Osaka.

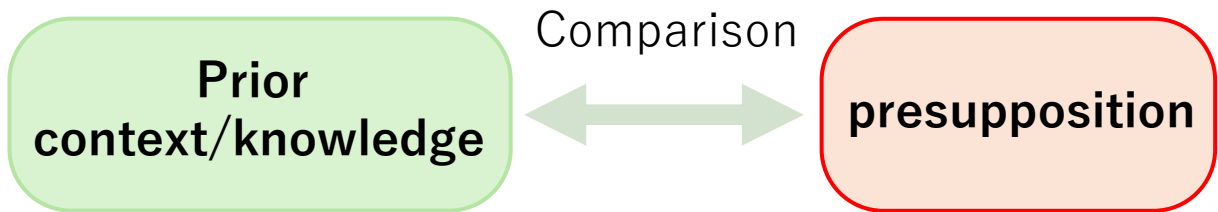

Pragmatics concerns how a **presupposition** and an **at-issue meaning** interact with a **context**.

Pragmatics: Interaction with contexts

Step 1: Checking presuppositions

a. **Presupposition:**

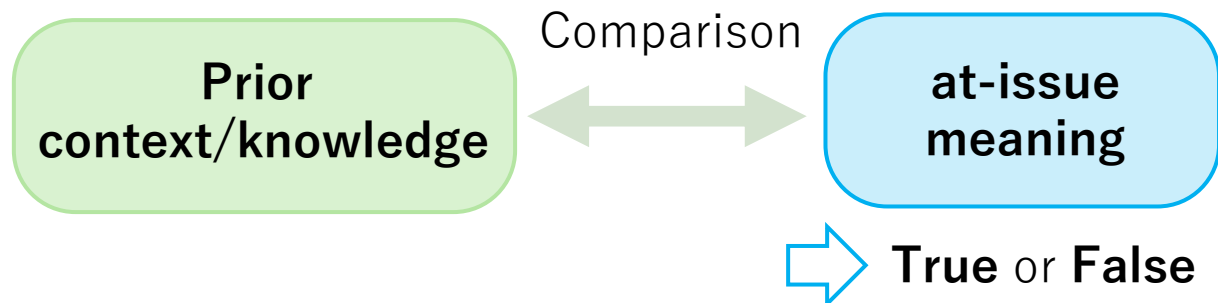

There was a boy from Osaka.

Step 2: Truth value judgment

b. **At-issue meaning:**

I met the boy from Osaka.

Presupposition

Table of contents:

1. Semantics vs. pragmatics
2. **Semantics:** Presupposition triggers
3. Semantics: Holes vs. Plugs
4. Pragmatics: Presupposition accommodation

“the” vs. “a(n)”

Examples:

- (1) a. I met **a** boy from Osaka.
b. I didn't meet **a** boy from Osaka.

We can always immediately check the truth value.

→ One of the following sentences is always T.

- (2) a. I met **the** boy from Osaka.
b. I didn't meet **the** boy from Osaka.

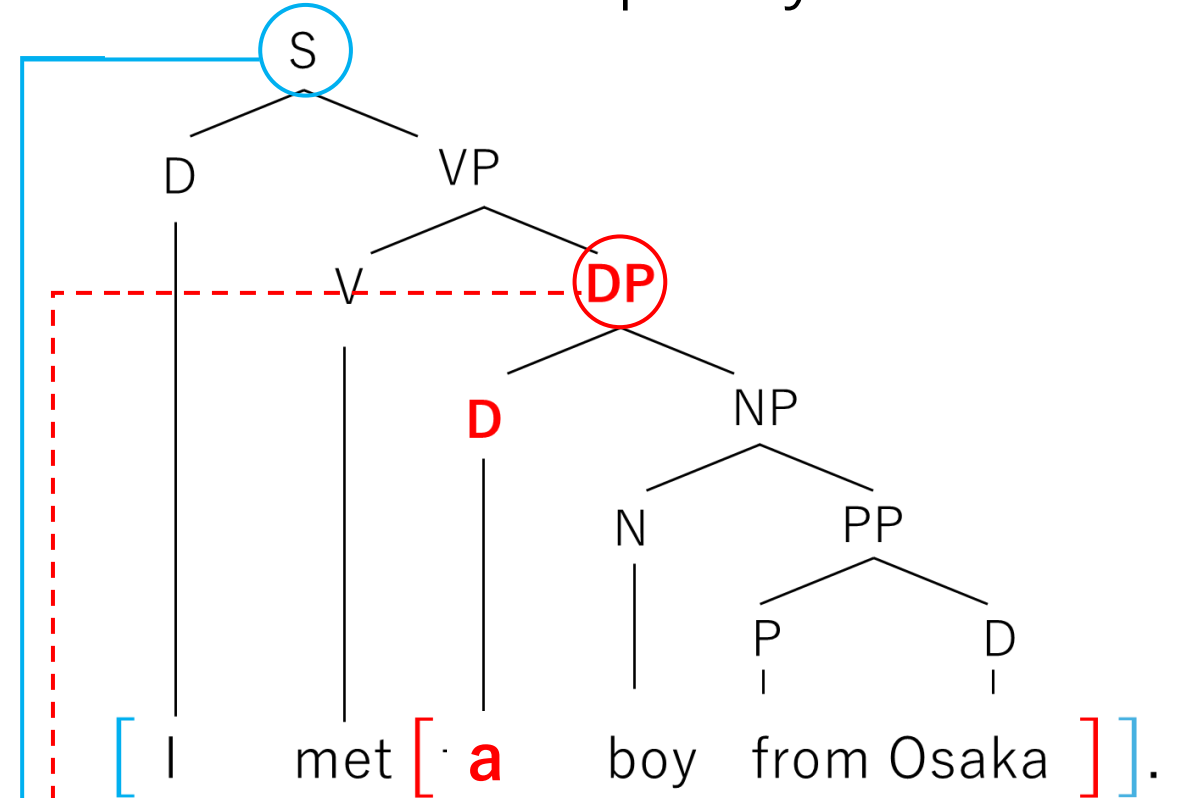

We cannot check the truth value unless it is understood that there was a boy from Osaka.

→ **If** there was a boy from Osaka,  presupposition **then** one of the following sentences is always T.

Presupposition triggers

What if “a” is used instead of “the”?

Semantics: multiplicity of meaning

→ a. Presupposition:

There was a boy from Osaka.

At-issue meaning:

I met **a** boy from Osaka.

Presupposition triggers

What if “a” is used instead of “the”?

Pragmatics: Interaction with contexts

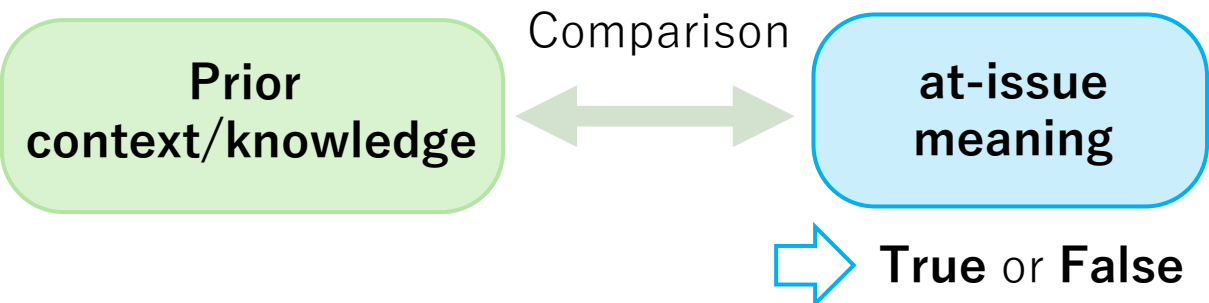

Step 1: Checking presuppositions

No presupposition to be checked.

Step 2: Truth value judgment

At-issue meaning:

I met **a** boy from Osaka.

Discussion Time!

Let's try to find other
presupposition triggers!

Presupposition triggers

Presupposition triggers are expressions introducing a specific presupposition.

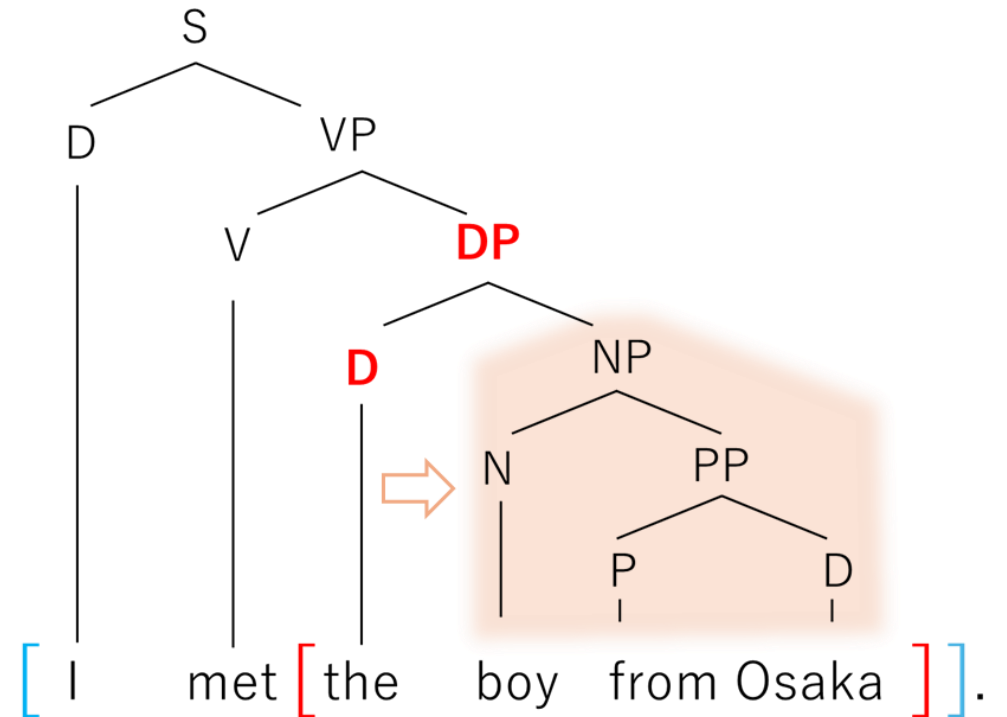

Example 1:

(1) Definite NPs:

I met [the boy from Osaka].

Presupposition:

“There was a boy from Osaka.”

Presupposition triggers

Presupposition triggers are expressions introducing a specific presupposition.

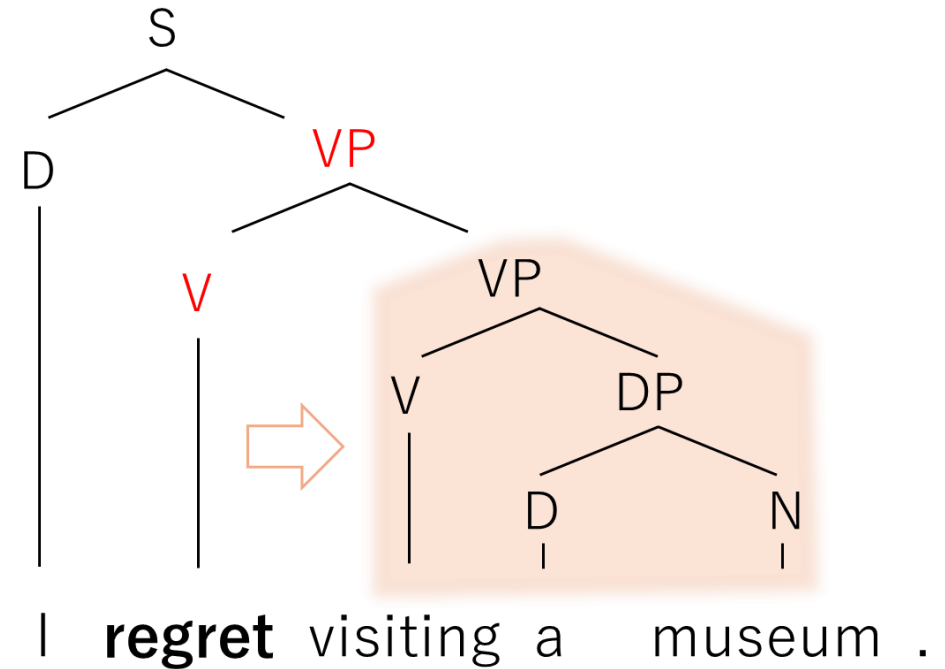

Example 2:

(2) **Factive verbs:**

I regret [visiting a museum].

Presupposition:

"I visited a museum."

Presupposition triggers

Presupposition triggers are expressions introducing a specific presupposition.

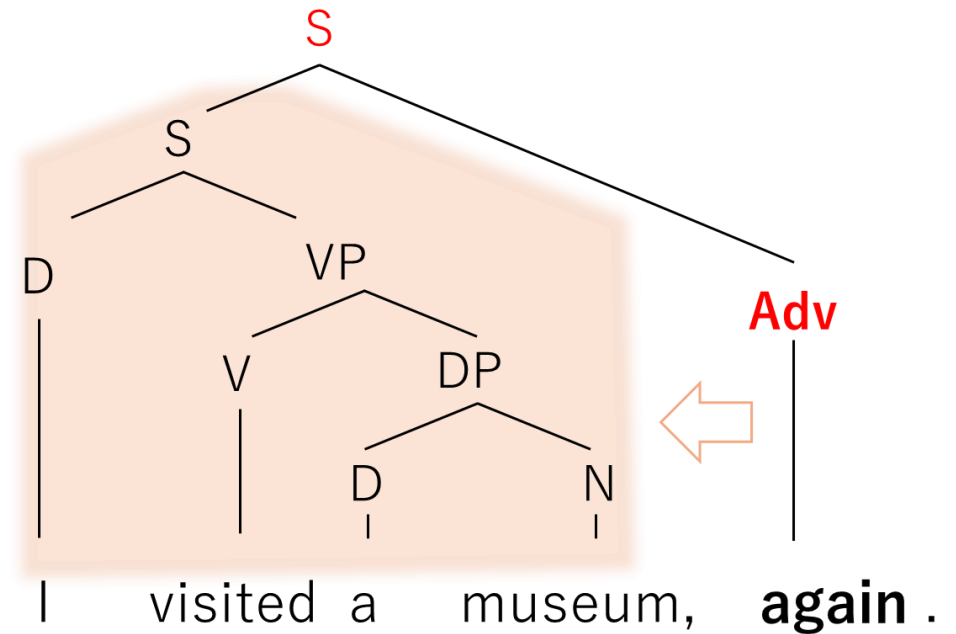

Example 3:

(3) **Additive particles:**

[I visited a museum], again.

Presupposition:

"I visited a museum."

Presupposition

Table of contents:

1. Semantics vs. pragmatics
2. Semantics: Presupposition triggers
3. Semantics: Holes vs. Plugs
4. Pragmatics: Presupposition accommodation

Table of contents:

1. Semantics vs. pragmatics
2. Semantics: Presupposition triggers
3. **Semantics:** Holes vs. Plugs
4. Pragmatics: Presupposition accommodation

Semantic operators and presupposition

Semantic operators only affect the at-issue content of the meaning, but they are not able to affect a presupposition.

Example 1: Negation operator

Sentence: It is not the case that
I **regretted** buying a book .

(A) At-issue meaning:

It is affected by semantic operators:

→ NOT [_P that I regretted buying a book] .

(B) Presupposition

It is not affected by semantic operators:

→ ^{*}NOT [that I bought a book] .

Semantic operators and presupposition

Semantic operators only affect the at-issue content of the meaning, but they are not able to affect a presupposition.

Example 2: Question operator

Sentence: Is it the case that
you **regretted** buying a book ?

(A) At-issue meaning:

It is affected by semantic operators:

→ ? [_P You regretted buying a book] .

(B) Presupposition

It is not affected by semantic operators:

→ ?^{*} [You bought a book] .

Interim conclusion

At-issue meaning and presupposition are orthogonal to each other.

Discussion Time!

While the independence of pre-suppositions is a well-established observation, some expressions have been found to “nullify” a presupposition.

Can you give an example?

Holes vs plugs

Issue:

Usually: Presupposition is triggered

I met [**the** king of France] .

→ There is a king in France.

Under certain conditions: It disappears

He knows [that I met [**the** king of France]].
Hole

→ There is a king in France.

Hole: a semantic operator that allows presuppositions to slip through it, even as that operator targets the at-issue content.

Plug: a semantic operator that blocks off the projection of presuppositions.

Issue:

Usually: Presupposition is triggered

I met [**the** king of France] .

→ There is a king in France.

Under certain conditions: It disappears

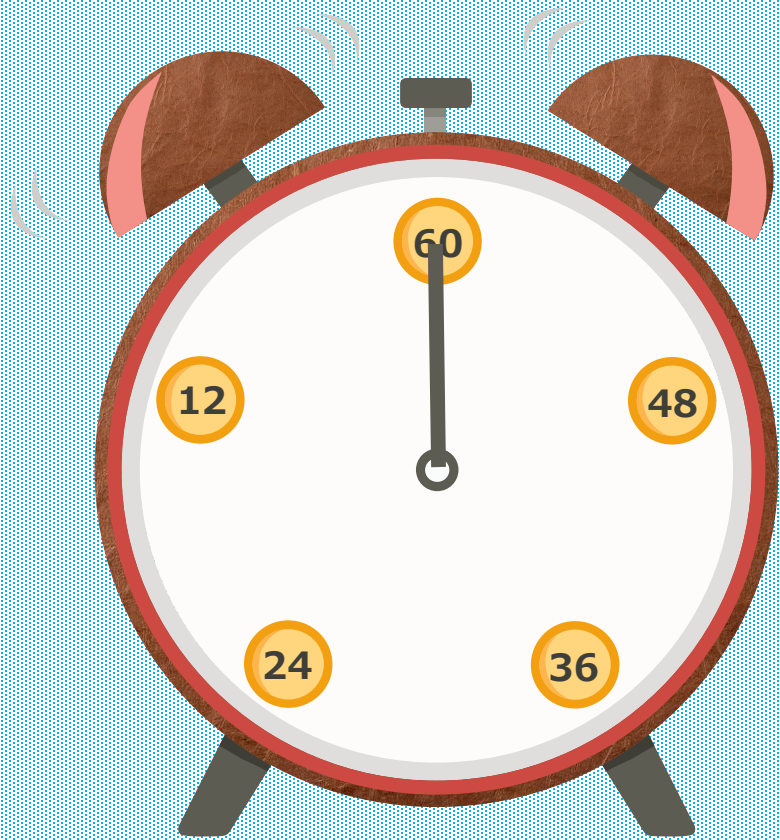

He knows [that I met [**the** king of France]].
Hole

→ There is a king in France.

He thinks [that I met [**the** king of France]].
Plug

↯ There is a king in France.

Quiz

Which embedding predicate is a “plug”?

A. *be glad that*

B. *admit*

C. *suspect*

D. *mention*

Presupposition

Table of contents:

1. Semantics vs. pragmatics
2. Semantics: Presupposition triggers
3. Semantics: Holes vs. Plugs
4. **Pragmatics**: Presupposition accommodation

Presupposition accommodation

When a speaker **presupposes** a thing that has not already been established in the common ground, s/he is implicitly asking the other discourse participants to **accommodate** that information by adding it to the common ground.

Example:

[**P** My boyfriend is a vet] and [**Q** he is smart].

In reality: Good inference

Prediction: Bad inference

Okay. [**R** She has a boyfriend].

Prediction

Prior
context/knowledge

Comparison

presupposition

The sequence should be wrong, because the presupposition is not included in the prior knowledge of the addressee.

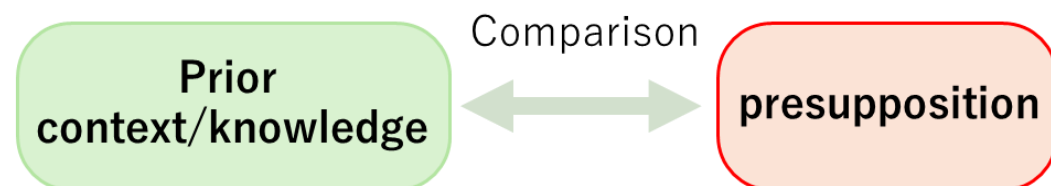

Presupposition accommodation

Question:

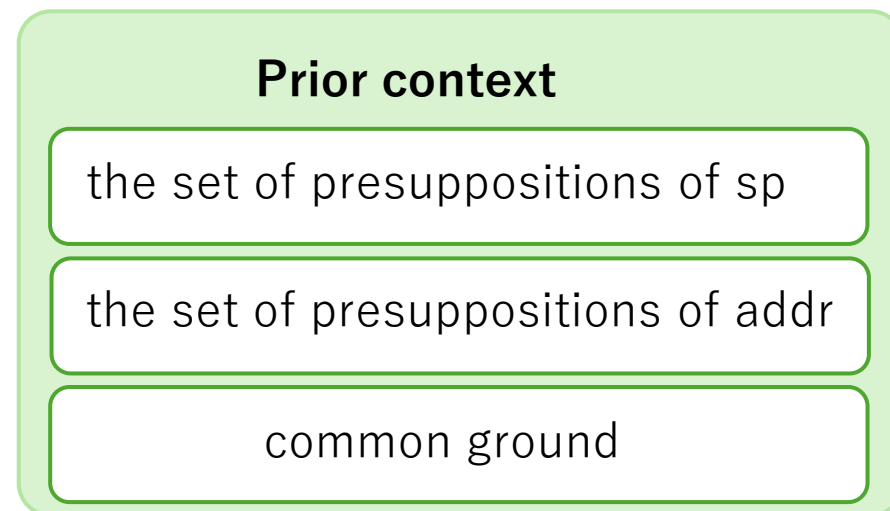

How do we update the discourse model, so we can better explain the data?

Theory: structured discourse context

(A) **Old model:** a context is unstructured

(B) **New model:** a context is structured

When a speaker **presupposes** a thing that has not already been established in the common ground, s/he is implicitly asking the other discourse participants to **accommodate** that information by adding it to the common ground.

Presupposition accommodation

When a speaker **presupposes** a thing that has not already been established in the common ground, s/he is implicitly asking the other discourse participants to **accommodate** that information by adding it to the common ground.

Theory: structured discourse context

(B) **New model:** a context is structured

the set of presuppositions of sp

 "Alice has a boyfriend",
 "Alice's boyfriend is a vet",
 "The earth is round",
 " $1 + 1 = 2$ "

Alice

 “1 + 1 = 2”,
 “Alice’s brother is a vet”
}

context

the set of presuppositions of sp

the set of presuppositions of addr

common ground

Structured discourse context

A **structured discourse context** is a model of the discourse context which has internal structure with multiple components, each of which stores information relevant for our communication.

Examples:

$$c = \langle \overset{\text{context}}{\boxed{pr_s}}, \boxed{pr_a}, \boxed{cg}, \dots \rangle$$

$$c = \langle pr_s, pr_a, cg, tdl, \dots \rangle$$

Concerns in Pragmatics:

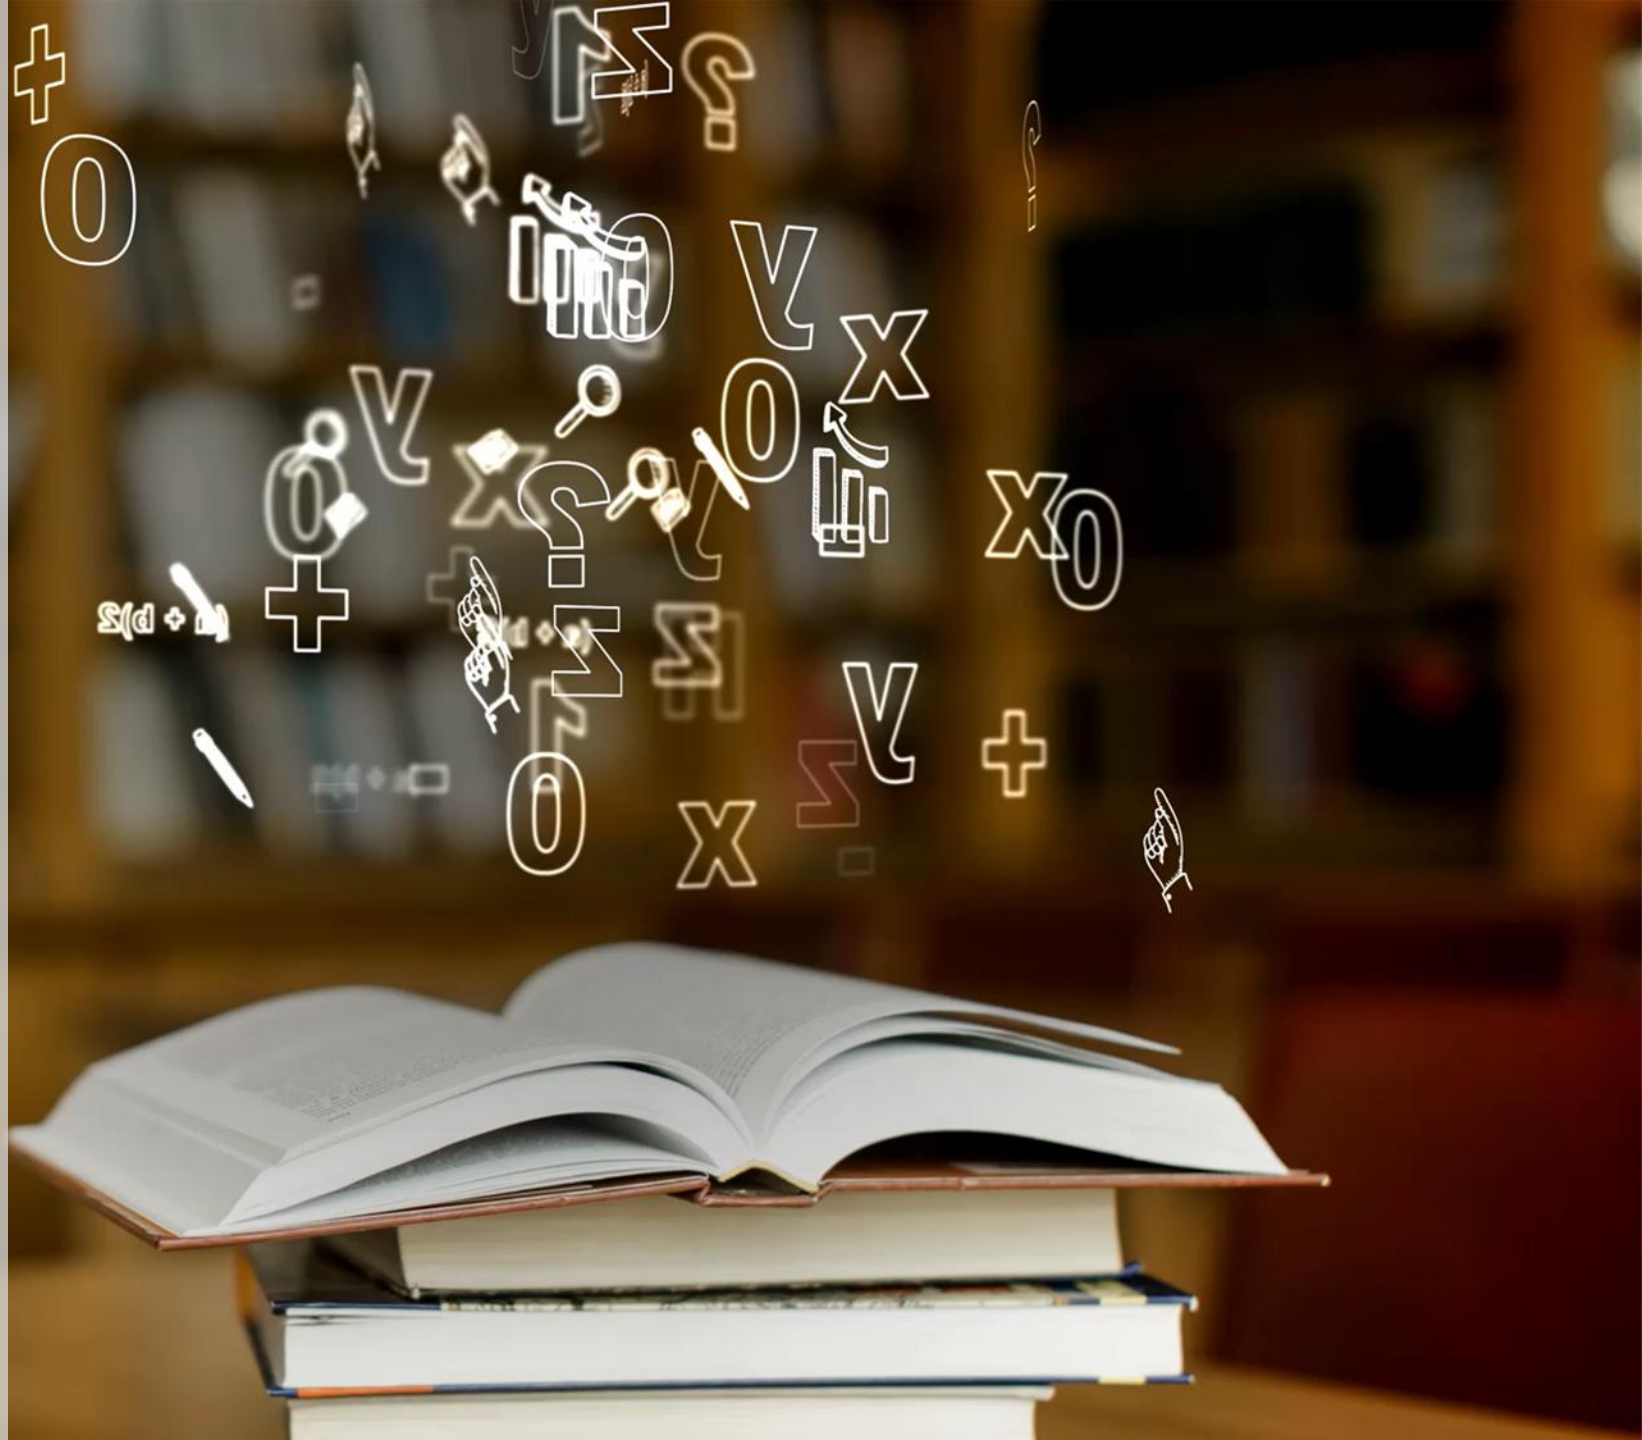

Many expressions in natural language have a discourse- oriented meaning.

What discourse structure is appropriate to capture the behavior of expressions?

Commonality or diversity among languages?

Speech act

Lec 3.2

Discussion Time!

*Can the sentence be False?
Why?*

- (1) I named this ship the Queen Elizabeth.
- (2) I name this ship the Queen Elizabeth.
- (3) Who are you?

(3) Who are you?

FALSE!

But let us think about the following sentence first.

(2) I hereby name this ship the Queen Elizabeth.

Can you find a scenario where it is judged **FALSE**?

I hereby name this ship the Queen Elizabeth

Using the sentence makes the sentence **True**.

No name

the Q. E.

False

True.

Utterance is made.

“I name this ship Queen Elizabeth.”

Other examples

Using the sentence makes the sentence **True**.

a couple

husband and wife

False

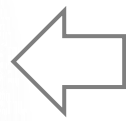

True.

Utterance is made.

“I now pronounce you husband and wife.”

Relation between a sentence and the world

Traditional view (static view)
[e.g., propositional logic]

Sentence

describes the world.

True/False

Relation between a sentence and the world

Alternative view (dynamic view)

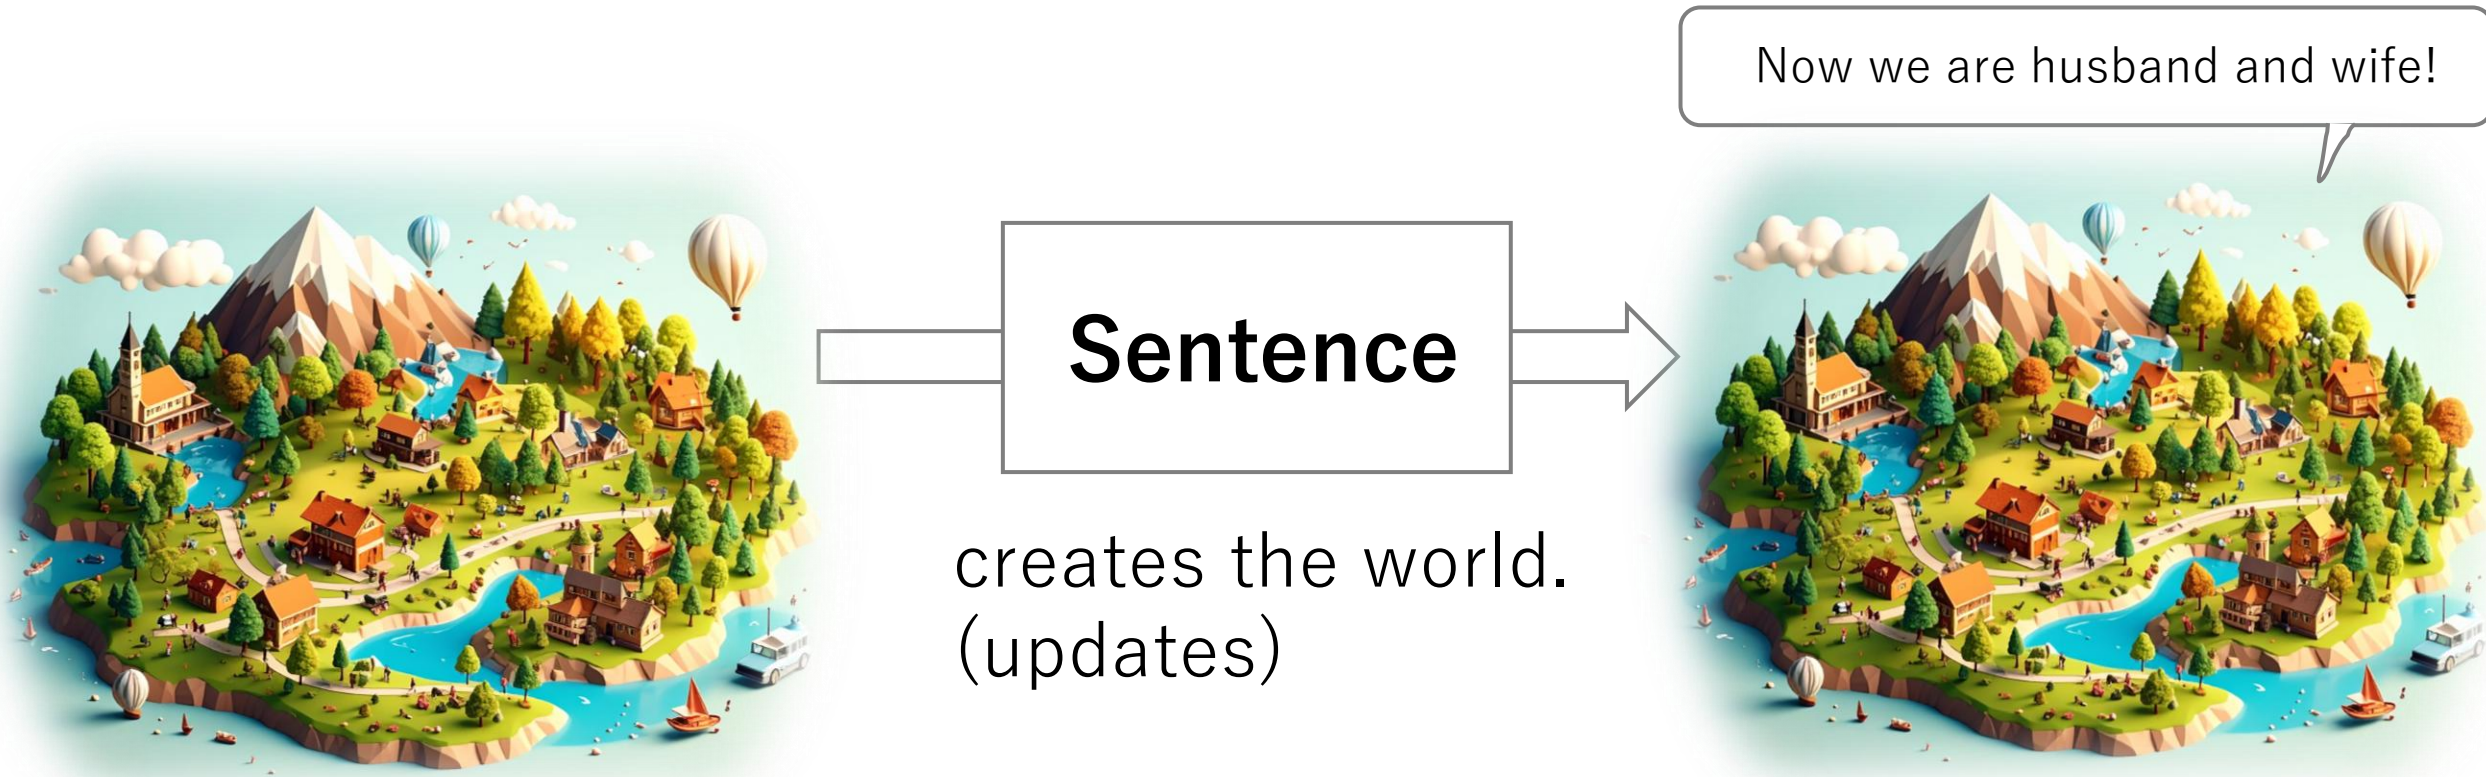

Table of contents:

1. Speech act
2. Performative sentences
3. Constative sentence
4. Toolkit: possible worlds

Table of contents:

1. Speech act
2. Performative sentences
3. Constative sentence
4. Toolkit: possible worlds

Levels of Speech act

Just like a physical act, saying to communicate is an act!

At least three different levels are recognized.

Examples:

(A) **Locutionary act:**

Grammar-internal actions

Example:

The speaker {**articulated a velar stop/used the word “can”**} as a noun.

(B) **Illocutionary act:**

The intended discourse function of the utterance

Example:

The speaker {**asserted a proposition/asking a question, requesting an action, promising to do something**} to the addressee.

(C) **Perlocutionary act:**

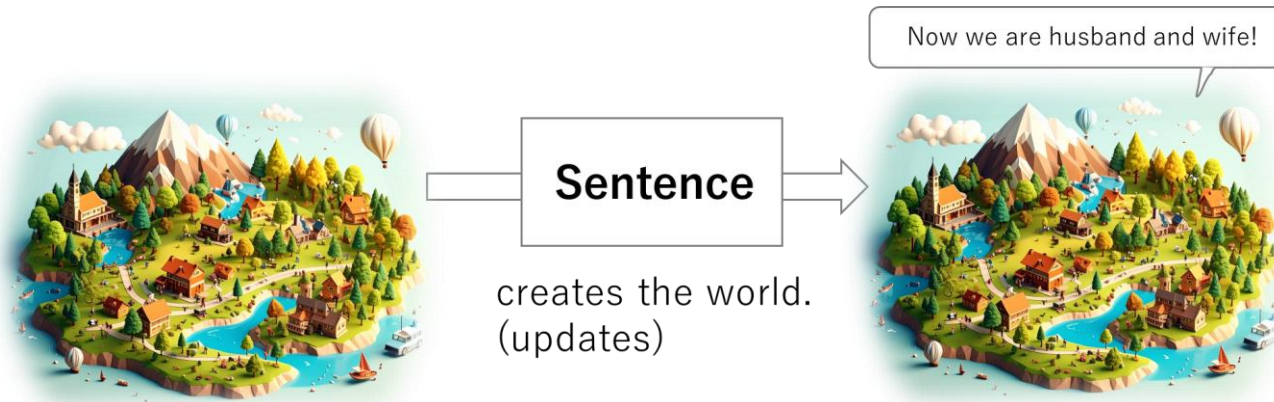

Actions which go beyond communication

Example:

As a result of the above actions, the speaker {**annoyed/blackmailed/tricked**} the addressee.

Relation between a sentence and the world

I pronounce you husband and wife!

This sentence explicitly states the **illocutionary act** being performed.

→ **performative sentence:**

Discussion Time!

Can you give other examples of performative sentences?

Constative vs. performative

A **constative sentence**: the truth of the sentence depends on the scenario you are in.

A **performative sentence**: the very act of uttering the sentence makes the sentence true.

Examples:

(1) Constative

- a. *I named this ship the Q.E.*
- b. *He judges you guilty.*
- c. *You promised to help me.*
- d. *They guaranteed a full refund.*
- e. *We apologized for the mistake.*

(2) Performative

- a. *I name this ship the Q.E.*
- b. *I judge you guilty.*
- c. *I promise to help you.*
- d. *I guarantee a full refund.*
- e. *I apologize for the mistake.*

Table of contents:

1. Speech act
2. **Performative sentences**
3. Constative sentence
4. Toolkit: possible worlds

Dynamic update by a constative sentence

the real world

Context

"I pronounce you H & W."

Utterance

creates the world.
(updates)

the real world

Now we are husband and wife!

Context

Felicity conditions are the **pragmatic criteria** that determine whether a speech act works as intended.

Felicity condition

When do we have a performative sentence?

1. Is it because of **the verb**? (lexicon?)
2. Due to the combination of **the subject** & the verb?
3. The subject, the verb and **the tense**?
4. The sentence structure + **the situation**?
5. The sentence structure + the situation + **who you are**?

Not enough
Not enough
Not enough
Not enough

Examples:

(1) **Constatives**:

- a. **She** promised to visit tomorrow.
- b. *I* promis**ed** to visit tomorrow.
- c. *I* pronounce you husband and wife.
(**in this classroom**, no)
- d. *I* sentence you to 6 years at hard labor.
(at a court, and 'I' am **a lawyer**, no)

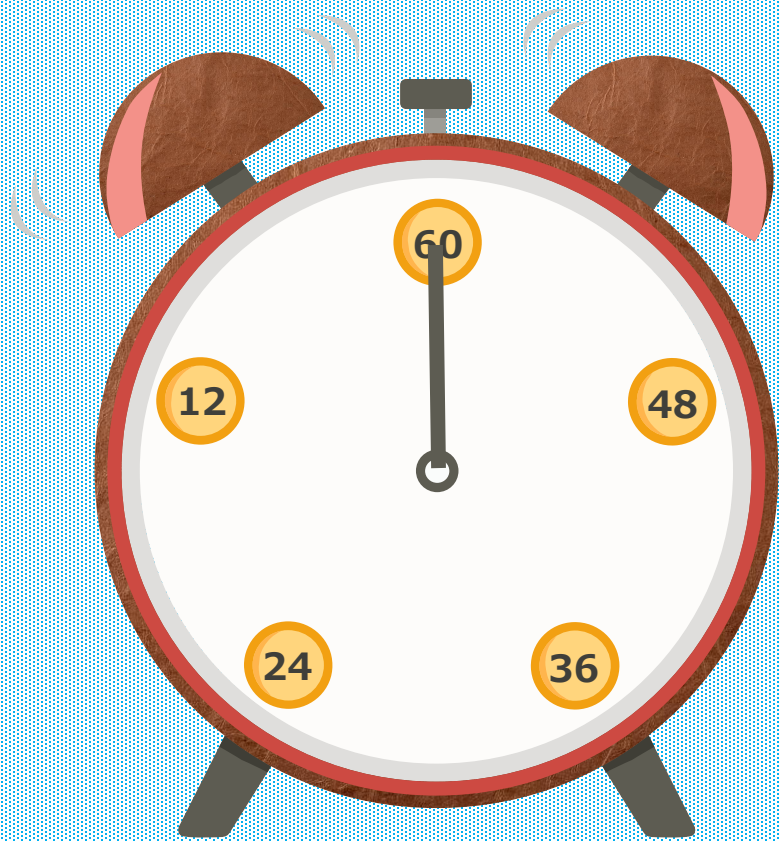

(2) **Performatives**:

- a. *I* **promise** to visit tomorrow.
- b. *I* pronounce you husband and wife.
(in a **wedding ceremony**, yes)
- c. *I* sentence you to 6 years at hard labor.
(at a court, and 'I' am **a judge**, yes)

It seems that we need multiple conditions for a performative sentence.

Quiz

Under what conditions does the following sentence cease to function as a performative sentence?

"I bequeath my collection to the museum."

A. *When "I" do not possess a collection*

B. *When "I" am not in a legal context*

C. *When "I" already did it*

D. *All of the above conditions*

Table of contents:

1. Speech act
2. Performative sentences
3. **Constative sentence**
4. Toolkit: possible worlds

Is constative sentence really incapable
of changing the world?

Recent studies propose the view that even a constative sentence is, in fact, used to change the **context**.

Dynamic update by a constative sentence

“The sun's not out.”

Dynamic update by a constative sentence

shared information

Context

"The sun's not out."

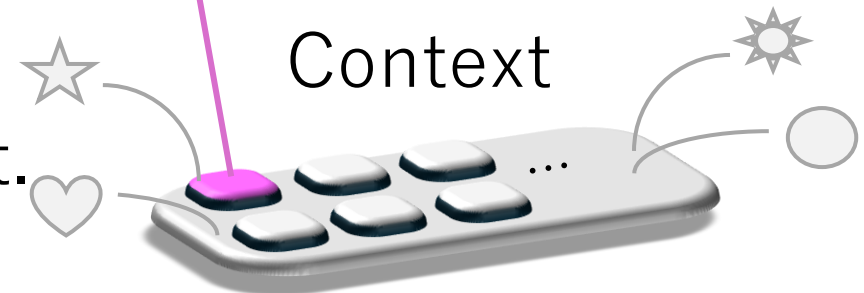

Utterance

creates the context.

Context

Interim Summary

Performative sentence

Constative sentence

Truth condition

It makes no sense to consider the truth condition.

True or False

Dynamic update

Yes!

Yes!

Semantics of the sentence

The semantics describes the change in question.

The semantics is used to update the context.

Possible
worlds

Examples:

(1) **Constative**

I named this ship the Q.E.

(2) **Performative**

I name this ship the Q.E.

A **constative sentence**: the truth of the sentence depends on the scenario you are in.

A **performative sentence**: the very act of uttering the sentence makes the sentence true.

Answer Because of our cognition ability.

Because the **prototype effect** is internalized within our cognitive processes
